

TIMBERHOARD

SKU: N/A | **Categories:** [Crowd Control](#), [Timber Hoarding](#)

PRODUCT DESCRIPTION

For installations that require the premium appearance of timber hoarding with the speed and simplicity of a modular panel system.

Timberhoard combines the same dimensions and visual appeal as T-Hoard and Smart Hoard with a fully integrated timber-finish panel built into a robust steel frame. Unlike traditional timber-clad hoarding systems, Timberhoard does not require a separate steel panel installation before the timber finish can be applied, significantly reducing installation time and labour costs.

The pre-fabricated design ensures a consistent high-quality finish while providing a strong and durable perimeter solution. Timberhoard is ideal for environments where aesthetics are important, including hospitality venues, VIP areas, bars, internal event spaces, back-of-house screening, and premium site compounds.

Timberhoard offers an attractive timber appearance while maintaining the practicality, durability, and rapid deployment benefits of a steel-framed hoarding system.

Additional Information:

PANEL SIZE:

2m wide x 2.4m high

FINISH:

Premium timber wooden finish panel integrated within a steel frame

FEATURES:

- Pre-built timber panel system for rapid installation
- No secondary steel panel required
