MOJO BARRIER 22.5° POSITIVE CORNER, BLACK [PINK]

Known as the “Pink” 22.5° Positive Corner, this MOJO Barrier in black seamlessly integrates with straight barricades to create smooth angles for effective crowd control.

SKU: 1002021.00 | **Categories:** Concert Barricades, Mojo Barriers

PRODUCT DESCRIPTION

The MOJO Barrier 22.5° Positive Corner—referred to as the “Pink” Corner—provides smooth transitions in barricade lines, making it ideal for concerts, festivals, and large-scale events. The positive angle directs crowds away from the stage, ensuring secure and organised flow while maintaining the robust durability of standard MOJO barriers.

Featuring a full floor plate, a double rear brace for enhanced stability, and a rear step for quick security access, this barrier is designed for both functionality and reliability. The black aluminium frame integrates seamlessly into event setups, while the silver base plate guarantees long-lasting durability.

Perfect for complex layouts, the 22.5° Positive Corner is ideal for shaping barricade lines around catwalks, thrusts, or round stages. Built for efficiency, it uses the same interlocking system as straight barriers and connects securely with a single bolt, allowing for rapid assembly.
