

VEHICLE CONCRETE BARRIER 2.5T

Concrete barrier to restrict access.

SKU: 1001508.00 | **Categories:** [Uncategorized](#)

PRODUCT DESCRIPTION

Each of these concrete barriers has four high-strength VIP steel eyelets, which can be used to connect the concrete barriers using steel cables. In this way, almost 4.5m can be blocked off with two vehicle barriers. Furthermore, all concrete barriers are equipped with RSA retroreflective hatching on the edges. As an accessory, we recommend using construction site speed cameras on the barriers. Four mounts are already installed on each barrier for this purpose. As a further safety measure, we recommend using anti-slip mats under the concrete barriers.

n

nThe steel cables can be opened to ensure that rescue and emergency services can arrive and leave quickly in an emergency.

n

nDimensions: 120cm x 70cm x 120cm

nWeight: 2.5 tonnes
